Objective

Aspiring DevOps/AI Engineer with a background in software engineering and technical support. Experienced in automation, cloud, and MLOps projects, with a strong foundation in Python, CI/CD, Docker, and infrastructure monitoring. Passionate about building scalable, automated systems and continuously learning modern DevOps practices.

Education

Sheridan College <i>Advanced Diploma in Artificial Intelligence Development and Applications</i>	Sep. 2025 – Present <i>Oakville, ON, Canada</i>
Cairo University <i>Bachelor of Biomedical Engineering</i>	Sep. 2019 – Aug. 2024 <i>Giza, Egypt</i>
Ramses College <i>IGCSE Certificate</i>	Sep. 2016 – May 2019 <i>Giza, Egypt</i>

Experience

Giza Systems <i>Software / DevOps Senior Engineer</i> - Contributed to the national IMEI project with Egypt's NTRA (National Telecom Regulatory Authority), ensuring device identity compliance and telecom security. - Developed automation scripts in Python and SQL to validate, clean, and remediate IMEI datasets in PostgreSQL, improving accuracy and regulatory compliance. - Maintained and optimized CI/CD pipelines for the IMEI intelligence platform, enabling faster and more reliable delivery of system updates. - Collaborated with engineering teams on Dockerized deployments and infrastructure improvements to handle high-volume national telecom data. - Authored detailed runbooks and troubleshooting guides that empowered Tier 1/2 engineers to resolve recurring issues independently.	Jan 2025 – Aug 2025 <i>Giza, Egypt</i>
Huawei <i>DevOps / Delivery Engineer, AUTIN Team</i> - Worked in the AUTIN delivery team, contributing to automation and integration of telecom network solutions. - Implemented and maintained CI/CD pipelines to streamline delivery workflows and reduce manual effort. - Diagnosed and resolved complex incidents across Linux systems, APIs, and databases using Bash scripting, logs, and Postman. - Developed automation scripts to speed up deployments, improve SLA adherence, and reduce troubleshooting time. - Collaborated with cross-functional teams to deliver client-ready solutions, optimize performance, and ensure smooth deployments.	Sep 2024 – Jan 2025 <i>Giza, Egypt</i>
Valeo Egypt <i>Intern, CI/CD and Support Team</i> - Worked with the CI/CD and support team to maintain reliable delivery pipelines for automotive LIDAR software. - Assisted engineers in debugging build failures and test automation issues, applying Python and Bash scripting to speed up troubleshooting. - Contributed to improving Jenkins pipeline documentation and recurring issue playbooks, ensuring smoother builds for development teams.	Feb 2024 – May 2024 <i>Giza, Egypt</i>
Canon Medical Systems <i>Customer Interaction Support Intern</i> - Supported deployment and maintenance of healthcare software systems used in hospital imaging departments. - Triaged and resolved issues related to medical imaging workflows, ensuring minimal downtime for clinical staff. - Documented troubleshooting procedures and user guides, improving system adoption and consistency across teams.	Jul 2022 – Sep 2022 <i>Cairo, Egypt</i>
WE Telecom Egypt <i>Governance and Cybersecurity Trainee</i> - Completed structured training in IT governance, risk management, and cybersecurity, with direct exposure to enterprise-scale infrastructure. - Learned industry best practices for secure configuration management, compliance validation, and safe data handling. - Participated in workshops focused on threat analysis, system hardening, and incident reporting — building strong foundations for DevOps security practices.	Summer 2021 <i>Cairo, Egypt</i>

Graduation Project

Deep Learning-Based 3D Segmentation & Classification of Brain Tumors Using MRI Aided With AR

- Built a deep learning-based system for brain tumor classification and segmentation using TensorFlow (CNNs, SegNet).
- Validated model outputs against real MRI clinical datasets, ensuring accuracy and reproducibility.
- Developed an AR module in Unity (C#) to visualize 3D segmentation interactively, making outputs interpretable for clinicians.
- **Award:** Won Best Graduation Project in Biomedical Engineering; selected among top 18 projects across the university.

Projects

IMEI Intelligence Platform (with NTRA) | *PostgreSQL, FastAPI, Docker, ElasticSearch*

- Developed with Giza Systems for Egypt's National Telecom Regulatory Authority (NTRA) to validate and analyze billions of IMEI records.
- Engineered SQL queries, deduplication pipelines, and TAC validation to ensure national telecom compliance.
- Deployed Dockerized microservices, exposed APIs with FastAPI, and built React dashboards for telecom analytics.

SLA Monitoring & Alert Engine | *Supabase, React, Tailwind, OpenAI, Gmail SMTP*

- Built a real-time SLA monitoring platform with automated alerting pipelines and data visualization dashboards.
- Integrated OpenAI for natural-language alert summaries and Supabase Edge Functions with Gmail SMTP for cost-effective notifications.
- Implemented filter controls, light/dark UI mode, and alert log history for operational visibility.

Task Assignment Automation System | *Python, Microsoft Graph API, SQLite, HTML/JS*

- Automated parsing of Outlook emails into structured tasks and surfaced them on a live team dashboard (To Do / In Progress / Done).
- Implemented daily resets, task aging indicators, and shift-aware assignments for productivity tracking.
- Logged all updates in SQLite for reproducibility and auditing.

Animap: Animal Welfare App | *React, Node.js, AWS, Firebase, MongoDB*

- Led full-stack development of community features: stray animal mapping, veterinary booking, messaging, and adoption workflows.
- Designed contribution and points system rewarding rescues, awareness posts, and adoptions.
- Integrated cloud storage and real-time updates with Firebase and AWS services.

Khroga: Hangout Planner | *React, Node.js, MongoDB*

- Developed a social platform for discovering and planning hangouts with personalized recommendations.
- Implemented authentication, event planning workflows, and location-based discovery of hidden gems.

Team Management Portal | *React, FastAPI, PostgreSQL*

- Built administrative dashboards with role-based access control for team workload and task tracking.
- Developed REST APIs with input validation, pagination, and CI checks to enforce reliability.

Airbnb Clone | *TypeScript, React, Node.js, PostgreSQL*

- Implemented booking workflows, secure authentication, and CRUD operations with error handling.
- Modeled relational schemas in PostgreSQL using Prisma ORM for accurate transaction handling.
- Delivered comprehensive technical documentation for reproducibility and peer review.

MLOps for Stray Animal Detection | *YOLOv8, DVC, Python, Geolocation*

- Built an end-to-end pipeline for classifying stray animal posts into categories (lost, injured, adoption, etc.).
- Implemented dataset versioning with DVC, reproducible workflows, and automated geotagging.

Sea Ice Concentration Estimation (Research) | *CNN, SAR Imagery, Python*

- Implemented deep learning pipelines based on published research for predicting ice concentration during melt season.
- Trained CNN models on Arctic SAR imagery datasets, benchmarking model accuracy across different architectures.

Gold Price Forecasting | *Python, scikit-learn, DVC*

- Cleaned and validated global/local gold price datasets; implemented forecasting pipelines with DVC for reproducibility.
- Evaluated multiple models (SVM, regression, neural networks) with performance comparison reports.

Stray Animal Text Classification | *Python, NLP*

- Labeled Facebook posts into seven categories (lost, injured, adoption, abuse, awareness, unclear).
- Trained NLP models and reported results with confusion matrices and F1-scores for evaluation.

Rental Price Classification | *Python, scikit-learn*

- Preprocessed real estate datasets with feature engineering and validated models via cross-validation.
- Trained SVM and neural networks, reporting precision, recall, and ROC AUC.

Sequence Alignment | *Python, Bioinformatics*

- Implemented pairwise and multiple sequence alignment algorithms for DNA sequences.
- Validated accuracy against bioinformatics benchmarks and visualized correlations.

MRI Simulator | *Python, PyQt5*

- Developed an interactive simulator for MRI physics, validated against theoretical models and standards.
- Created a PyQt5 GUI to allow experiment design, execution, and reproducible reporting.

Image Processing Toolbox | *Python, NumPy*

- Implemented advanced image processing techniques, segmentation, and feature detection.
- Produced reproducibility reports documenting parameter effects on outputs.

Music Equalizer | *Python, DSP*

- Implemented digital filters for equalization and validated outputs with test signals.
- Visualized frequency responses for interpretability and reproducibility.

Curve Fitter | *Python, SciPy*

- Implemented polynomial and spline-based interpolation with error analysis.
- Generated comparison reports with visualization of fit quality.

Nyquist Theory Visualizer | *Python*

- Created interactive simulations of sampling and aliasing concepts.
- Annotated visualizations to improve clarity for learners.

Other Utilities & Tools

- Escalation Toolkit — Ruby/Python/SQL scripts for data remediation in production systems.
- API Troubleshooter — Postman/cURL collections for reproducible API bug reports.
- NLP Research Summarizer — Hugging Face transformers to summarize technical research papers.

Technical Skills

Languages: Python, SQL, Bash, Ruby, JavaScript/TypeScript

DevOps: Docker, Kubernetes, GitHub Actions, GitLab CI, Jenkins, Terraform, Ansible, CI/CD Pipelines

Monitoring: Prometheus, Grafana, ELK Stack

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Cloud: AWS (EC2, S3, RDS, Lambda, CloudFront), GCP, Azure (basic)

Web/APIs: REST/JSON, Postman, cURL, HTTP debugging, webhooks

ML/AI: Hugging Face, YOLOv8, TensorFlow/Keras, DVC, scikit-learn

Tools: Git, GitHub/GitLab, Jira, Confluence, Regex, JSON tooling

Practices: Root-cause analysis, incident triage, automation scripting, reproducibility, technical documentation

Languages

English: Fluent (IELTS Academic 7.5)

Arabic: Native

Courses

- Machine Learning Specialization — Stanford (Coursera)
- Java Programming — Duke (Coursera)
- Software Engineering Foundations — ALX & Mastercard Foundation
- Cloud DevOps Nanodegree — Udacity (self-paced)
